L-PRF for Lower Wisdom Tooth Surgery

Natural Healing Using Your Own Blood

What is L-PRF?

- ✓ Small sample of your blood is taken during surgery
- ✓ Blood is spun in a centrifuge
- ✓ Creates a natural healing membrane plug which is placed into the extraction site
- ✓ Releases growth factors that help healing

Benefits for Patients:

- ✓ Less pain during the first few days
- ✓ Lower risk of dry socket
- ✓ Faster gum healing
- ✓ Improved early bone healing
- ✓ Reduced need for pain medication

*Evidence from systematic reviews and randomized clinical trials (Clinical Oral Investigations, BMC Oral Health, UMS) shows L-PRF can reduce pain, improve soft-tissue healing, and enhance early bone healing after wisdom tooth extraction.
